

WATER POLICY

Water is the basic amenity for domestic, agricultural and industrial use. As a responsible corporate, we at Mahindra & Mahindra Ltd. are committed to protecting and conserving water resources in our operations through efficient water management practices and governance systems, leading towards effective water stewardship.

Objective:

Adopting sustainable practices in our business & creating a value for all our stakeholders through the optimal management of the water resources, ensuring water security and regulatory compliance through the effective use of knowledge and innovative technology.

To achieve this, we shall endeavor to:

- Minimize the impact on water resources from operations by decreasing water use, effective management & no waste water discharge.
- Share and promote water stewardship practices like rainwater harvesting, waste water recycling and groundwater recharging.
- Ensure that water withdrawn, used, stored and / or discharged is compliant with water related laws and regulations thus maintaining a positive legal compliance.
- Benchmarking & setting targets to reduce water footprint.
- Ensure access to clean & safe water for all our employees.
- Engage with our stakeholders and communities to increase their awareness on the responsible use of water and involve them in protection / regeneration of water resources.
- Collaborating with policy makers & NGO's to promote watershed management.
- Contribute to the development of water standards and policies, locally in partnership with key stakeholders.
